EDUCATION

Stanford University

M.S. in Computer Science
Artificial Intelligence Track
Coterminal Master's Program

Stanford, CA
Graduated: June 2023
GPA: 4.05

Stanford University

B.S. with honors in Computer Science
Artificial Intelligence Track

Stanford, CA
Graduated: June 2022
GPA: 3.78

Honors/Awards

Completed undergraduate CS Honors thesis.

RESEARCH EXPERIENCE

Research Focuses: Robot Learning, Reinforcement Learning, Generative Models

Toyota Research Institute (TRI)

AI Resident in the Large Behavior Models (LBM) Division

July 2023 – Present

Research focuses on leveraging diffusion models and vision-language-action models (VLAs) for robotic manipulation. Led a project on using image and video diffusion models to generate subgoals for robotic manipulation tasks. First-author publication under review at the IEEE International Conference on Robotics and Automation (ICRA) 2025. Current research involves co-training VLAs with action prediction and video prediction objectives to transfer knowledge from Internet video data to robot agents. Developed key skills including working with large-scale diffusion and transformer-based models, and structuring data loaders and models for multi-node, distributed training.

Stanford IRIS Lab – Prof. Chelsea Finn

Undergraduate/Master's student

October 2020 — June 2023

Research focused on robotics-oriented offline reinforcement learning. Three first/co-first-author publications:

- D5RL: a benchmark to evaluate offline RL and offline-to-online fine-tuning methods on visually diverse, realistic, simulated robotics tasks. Co-first-author publication at the Reinforcement Learning Conference (RLC) 2024.
- MOTO: a model-based reinforcement learning method designed for efficient offline-to-online fine-tuning for vision-based manipulation tasks. Co-first-author publication in the Conference on Robot Learning (CoRL) 2023.
- LAEO: an offline reinforcement learning method using contrastive learning for data without reward labels. First-author publication in the Learning for Dynamics & Control Conference (L4DC) 2023.

Stanford Intelligent Systems Laboratory (SISL) – Prof. Mykel Kochenderfer

Undergraduate student

June 2019 — March 2021

Research focused on using machine learning and reinforcement learning techniques to improve collision avoidance in autonomous vehicles and unmanned aerial vehicles (UAVs). Two first/co-first-author publications:

- A method to learn 3D velocity maps from radar data for autonomous vehicles. Co-first-author

- publication in the IEEE International Conference on Intelligent Robots and Systems (IROS) 2021.
- A collision avoidance system for autonomous drones using monocular vision and deep reinforcement learning. First-author publication in the American Institute of Aeronautics and Astronautics (AIAA) SciTech Forum 2021.

Johns Hopkins University Applied Physics Laboratory (APL)

Research Intern

June 2020 — May 2021

Developed a reinforcement learning-based method to autonomously respond to cybersecurity threats on industrial control systems. Second author publication in the IEEE/IFIP International Conference on Dependable Systems and Networks Workshops (DSN-W), 2022.

Stanford Network Analysis Project (SNAP) – Prof. Jure Leskovec

Undergraduate student

September 2019 — June 2020

Conducted research on using graph convolutional networks to predict interactions between microbes in the human gastrointestinal tract.

***denotes equal contribution**

OUTREACH

Breakthrough Silicon Valley (**BTSV**)

San Jose, CA

Volunteer tutor

November 2023 – April 2024

Provided homework support to high school students who are on track to becoming first-generation college students. Primarily assisted with mathematics.

East Palo Alto Stanford Academy (**EPASA**)

Stanford, CA

Volunteer tutor

October 2018 – March 2020

Provided homework support to seventh and eighth grade students from low-income backgrounds in mathematics and English, and helped students to develop effective study skills.

Stanford 1st Ward Volunteer Tutoring Program

Stanford, CA

Volunteer tutor

September 2017 – June 2019

Provided homework support to K-12 students in mathematics, reading, and English.

SKILLS

Machine Learning Frameworks

JAX, PyTorch, Tensorflow 2.0

Cloud Computing

Amazon SageMaker

Reinforcement Learning Tools

deepmind-acme, TF-Agents, RLkit, JAXRL

Simulation Tools

MuJoCo, Microsoft AirSim

Programming Languages

Python, C++
